

RADAR-Assess The Situation Part 2

Date: _____

Description :

RADAR stands for:

- R = recognize the risk
- A = assess the situation
- D = develop a safe solution
- A = act safely to fix the problem
- R = report and record the upset condition

Contributing Factors:

In this crew talk we will continue to discuss the first A in RADAR: Assess the Situation. The next five questions in the 10 step assessment are:

- 6. Position - Could your body position cause a problem?
- 7. PPE - Personal Protective Equipment in good condition?
- 8. Lockout - Locked out and achieved ZERO energy?
- 9. Trained - Have you been trained for the task?
- 10. Help - If you can't see a SAFE solution - STOP and ask for help.

Recommended Preventative Actions:

Make an effort to give RADAR a try.
 When you spot an Upset Condition, take the time to STOP and go through the all 10 steps of Assessing the Situation. Think about what you have noticed instead of ignoring like we often do.
 You have just improved your chances to control nearly everything around you for this moment.

Discussions / Follow-up Actions:

How do you know if you have achieved ZERO energy?
 What are the benefits of proper training?
 What are the characteristics of a person who asks for help?
 (use back of sheet if necessary to record the discussion)
