

RADAR - Assess the Situation Part 2

Date: _____

Description :

- R = recognize the risk
- A = assess the situation
- D = develop a safe solution
- A = act safely to fix the problem
- R = report and record the upset condition

Travelling to Work

Contributing Factors:

- Assess the Situation. Ask yourself "what could go wrong". The next 5 questions in the 10 step assessment are:
6. Body Position - While travelling to work - wear you seatbelt!
 7. PPE - What personal protective equipment is required for your task?
 8. Lockout - when the the crew transport has a flat tire is it properly locked - blocked - chocked while changing the tire?
 9. Trained - Is the driver of the crew transport licensed, trained , alert and focused on the job?
 10. Help - If you are unsure about how to do a task - just ask!

Recommended Preventative Actions:

Getting to work and getting back is one of the most dangerous parts of a silviculture workers job. Long drives, busy roads and fatigued drivers are all factors that contribute to incidents during worker transport. Everyone wants to arrive alive - report unsafe conditions to your supervisor.

Discussions / Follow-up Actions:

Does the crew know the safe work procedures for changing a flat tire?
Do you have alternate drivers for your vehicles?What is your companies method for reporting unsafe conditions? (use the back of the sheet if necessary to record the discussion)
