What to do in the event of an emergency: (General)

"Stay Calm"

- Shut down
- Call First Aid and Supervisor and inform them that there is an emergency
- State your name and exact location
- State the number of injured and the nature of the injuries. Do not say the name of the injured person
- Ensure the scene is safe and that there is no further danger to you or the injured person
- Do not leave the injured worker unattended
- Have someone monitor radio for communications
- Be prepared to assist when directed by the first aid attendant
- The first aid attendant (with consent of the injured worker) will make the decision on whether the worker should be transported to medical aid. The attendant's decision of treatment/transport must not be overruled by the employer or supervisor. The attendant does not have the authority to overrule a worker's decision to seek medical attention

Safe Work Procedures for Hand Falling and Bucking

- Access to fallers within a two-tree length area of active falling is to be roped off and gated. SWP's are to
 be followed at all times when entering and exiting any active falling areas. Chainsaw to remain shut off
 after giving clearance for someone to enter your active work area. All active access trails to falling areas
 are to be cleared out, well-marked and their location must be shared with first aid.
- Proper PPE must be worn and maintained at all times. All hi-vis clothing must meet the current standard.
 Appropriate falling tools must be used and maintained. Appropriate wedging tools must be readily available at the base of every tree being fell.
- The pushing of trees may only be done to overcome a falling difficulty. Domino falling is *unacceptable!* The SWP's as written in WorkSafe OHS Regulation 26.24 (6) must be followed.
- All danger trees are to be fallen progressively into open areas. Danger trees must be assessed before
 working in the area made hazardous by them. Call your supervisor or partner for qualified assistance as
 needed. Bypassed danger trees are unacceptable!
- All fallers workmanship must meet or exceed the minimum acceptable standards in the OHS regulations.
 This includes ensuring sufficient undercuts are cleaned out and are without a dutchman. Backcut is placed
 higher than the undercut. Sufficient holding wood (at a minimum on both corners) is maintained.
 Unnecessary brushing of timber is unacceptable!
- If a cut-up tree must be left, call the supervisor and inform all workers who may come across it. Leave a roped falling sign indicating that there is a cut-up tree. (Do Not Enter) Ribbon off a safe work area around the tree as required.
- All fallers are to establish escape trails and clear 10 feet preferably to a safe cover spot when falling EVERY tree.
- Alternate falling means must be available to all fallers at all times. i.e., blasting, machine assist, falling jack, no work zones.
- Know the adverse weather conditions shutdown criteria for your area and never work beyond your personal comfort levels.
- Two tree length rule is in effect at ALL times for fallers and any other workers in the area.
- Fallers are to follow all SWP's for bucking including not going below fell and bucked to buck, clearing escape routes, bucking at pivot points where possible and completing all bucking cuts. Incomplete bucking cuts must be marked and noted. Buck windfalls for safety as needed. **Never** go behind or below a bucked off root wad.
- Qualified assistance must be readily available to all fallers at all times. Fallers must have an effective
 means to summon qualified assistance as needed. All fallers must know who they are responsible for
 checking with and must be within 10 minutes surface travel time of their partner. Checks must be done at
 a minimum of 30-minute intervals. Lift earmuffs and listen for your partner continually throughout the day
 every time your chainsaw is shut off.
- If doing checks by radio, say the actual time you will be doing your next check. If your partner does not answer, check the channel on your radio and try again. If there is still no answer, shut down, inform the crew that your partner is not responding and start walking towards him.

Refer to the BCFTS Info Flips for an in-depth review of hand falling and bucking standards. Refer to the OHS Regulations for the legal requirements that must be met in all workplaces.

"STOP FALLING" and call supervisor if:

- · Qualified assistance is needed
- Phase congestion becomes an issue
- The prescription cannot be followed as written or to report any EMS infractions (trespassing, etc.)
- There is a need to discuss any safety issues (falling incident, unsafe falling situation etc.).

Changes to the Falling Plan or Worksite

Identify new hazards and changes to the worksite. Describe details of changes and any updated controls. Take into consideration the items listed below:

- Traffic control/signage and gating
- Introduction of or coordination of phases/people/machinery
- First Aid Coverage/fire equipment/ETV relocation
- Check in procedure changes

- Onsite visitors
- ERP changes
- Changes to risk levels
- Radio frequency changes
- Safe working distances/blast zones
