Occupational Analysis Chart – BASE Internal Auditor

Description

A BC Forest Safety Council BASE internal auditor performs internal audits for BASE companies. Auditing involves collecting evidence including documents, observations and interviews to ensure that a company is able to receive or maintain its SAFE Certification. Auditing is an integral part of the SAFE Companies system.

An auditor’s work environment depends on the scope of activities that the company undertakes, which may include, but is not limited to, the following:

- Manufacturing
- Harvesting
- Trucking
- Silviculture
- Fire management
- Administrative functions

Internal Auditors must be able to recognize, evaluate, and control the hazards in any environment they work in. An auditor must understand and consistently apply industry-specific practices and applicable regulations and standards.

Work is done indoors and outdoors, most often accompanied by company personnel, and in varied weather conditions. Generally auditors supply their own clothing and equipment and must work directly for an employer in an ownership or permanent employee scenario. For detailed information on the scope of knowledge and skills taught and assessed in this program refer to SAFE Companies program staff and the [BASE Auditor manual](#).
